

View Your Mind: How to turn Xlink on

Posted on March 16, 2017 by admin

First of all, thanks a million to the creators of [View Your Mind mind](#) mapping software. It's a great piece of useful free license software! Everything was going very well while I was using it. I especially found useful the xlink (xlinks?) feature. This feature will allow you to connect a visual reference from one branch to any other branch on the screen. In my case I was trying to track the last 10 years of my life visually and all the interesting connections and overlaps of people in my life but I needed the xlink feature to do so. I figured out that if you hold the shift key and click your mouse over a branch that the xlink started working just as the documentation, but I accidentally switched modes and couldn't get it on again. Unfortunately, p 33 of the documentation wasn't helpful at all to me. Finally, I figured out how to turn it back on so I wanted to throw it out there for anyone else who might have struggled.

First, add the 'link mode' to your toolbar

Next, find it on your toolbar and make sure this one is selected

Next, start working by clicking 'shift' on your keyboard when you click your mouse.

Enjoy!
