How to Start Thunderbird and Other Programs at Startup in Ubuntu 13.10

Posted on February 12, 2014 by Wayne Taylor

I always open my email when I turn on my computer so I figured I could save a few steps and have it open automatically. It's easier than I thought and you could apply this to other programs/applications as well (like Firefox, etc). It is reported this tutorial also works as far back as Ubuntu 12.04 as well. So put on your seatbelt, kids! Here we go! 1. Press the Super Key and open your Dash and type 'start' and wait. It should bring up the 'Startup Applications' thingy below. Click it.

 **open-hud**

http://www.wayneoutthere.com/uploads/2014/02/open-hud-300x198.png

2. Click the 'add' button on the first window that pops open and then the 'browse' button to go on the hunt for The Bird that is Most Thunderous...

 **add startup**
Image not readable or empty
http://www.wayneoutthere.com/uploads/2014/02/add-startup-300x234.png

3. Click 'File system' on the left pane, then find and open 'usr' folder on the right pane...

 **browse to usr**
Image not readable or empty
http://www.wayneoutthere.com/uploads/2014/02/browse-to-usr-300x175.png

4. Navigate down to find the 'bin' folder, open it

 **open bin**
Image not readable or empty
http://www.wayneoutthere.com/uploads/2014/02/open-bin-300x175.png

5. Navigate down (you might want to use your 'page down' button to speed this up) until you find 'Thunderbird' and click 'open' button

 **page down to thunderbird**
Image not readable or empty
http://www.wayneoutthere.com/uploads/2014/02/page-down-to-thunderbird-300x175.png

6. Fill in your favourite deets as I did in the most creative way below and click 'add':

 **name it**
Image not readable or empty

7. In order for this to actually work you have to log out or restart your computer. You can do that with the 'log out' option at the cogwheel on the top right side of your screen

You are done, son. It's that fun and easy. Next time invite your friends and Gramma.

*Note: for some reason I had trouble finding Firefox but eventually it was there and I found it.

Now when you turn on your computer Thunderbird and whatever other program you want will be ready and waiting.
